VIC Custom Panel Manufacturing

Get the most out of your machinery

VIC offers construction and custom programming of control panels that meet or exceed UL 508a, NEC, OSHA, and Hazardous Location Designations. VIC designs machine specific PLCs and HMIs with the ability to integrate Ethernet, Devicenet and other plant wide networks. We are a leading custom control panel manufacturer using the highest quality components. Using state-of-the-art CAD design systems, our engineers have the expertise and layout know-how unrivaled in the industry. Custom HMI (Human Machine Interface) design finalizes the process with a control interface that is intuitive and loaded with process control information and archived data as well as easy to understand trouble shooting and other system information.

VIC offers the ideal solution for OEMs looking for a panel manufacturing resource with extensive knowledge of North American standards and the ability to design and manufacture control panels specific to their requirements. Whether it be a single control panel for a single piece of machinery, or complete industrial control systems, VIC goes the extra distance to understand your market and machinery to design and produce controls that will optimize the performance of your equipment.

Process equipment, conveying systems, feed systems, separation equipment - you name it, VIC has the experience to design a control system and interface that will maximize performance. VIC is also extremely experienced in virtually any market requiring controls technology - plastics, wood, municipal waste, recycling, paper, alternative fuels, biomass - the list is virtually endless.

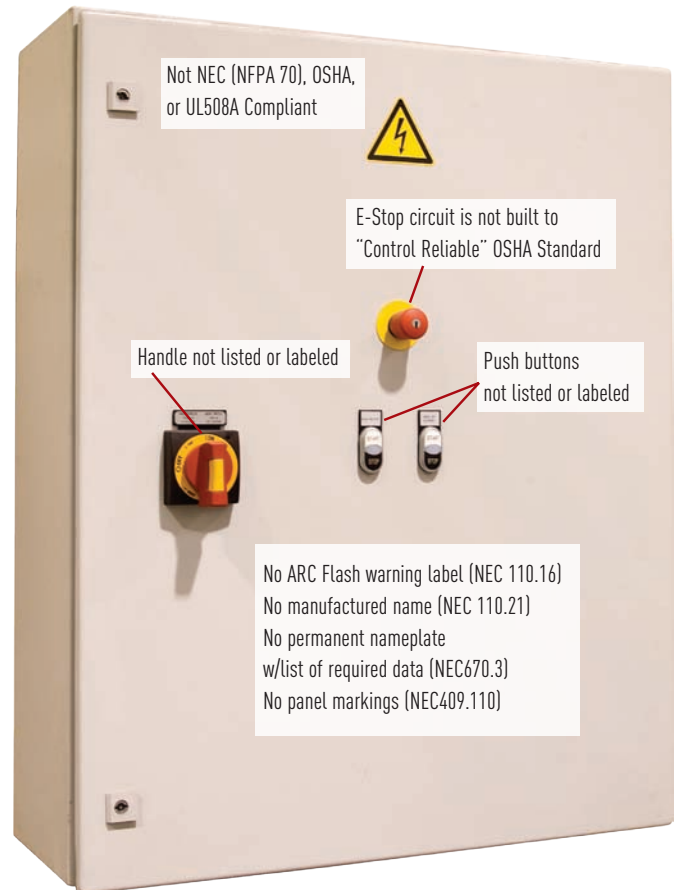

In addition to a vast range of expertise and knowledge, VIC provides the highest quality available. Redundant quality checks are incorporated throughout the design and manufacturing process, from design to fabrication to programming to integration to project management to commissioning - VIC makes sure that every step is of the highest quality workmanship and of the highest quality components.

Your Imported Machinery Needs To Meet North American Standards

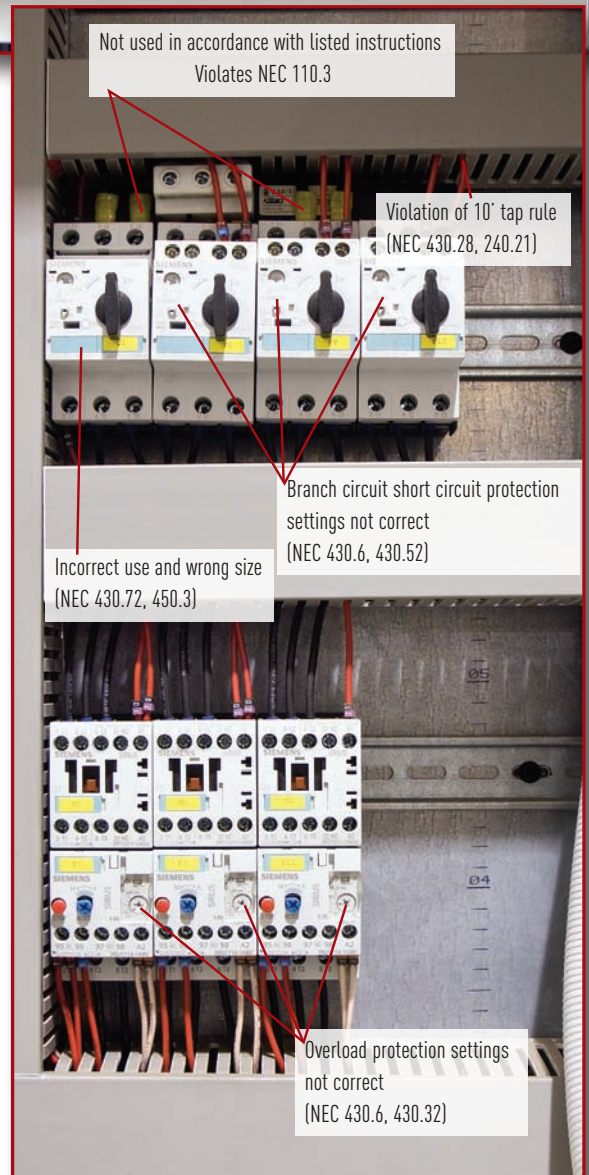

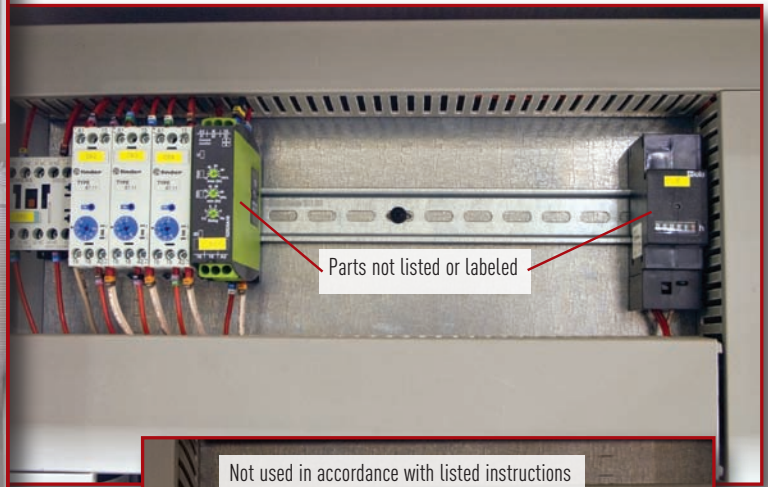

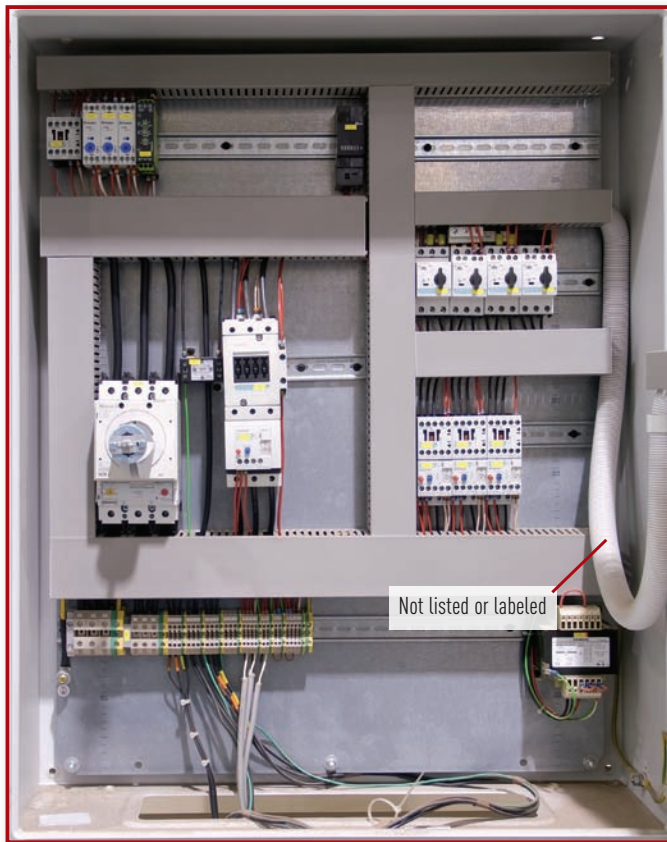

Get the full functionality of your imported equipment with the safety and code compliance of North American panels

Your company imports some of the finest machinery in the world - but the supplied control panels rarely comply with North American electrical and safety codes. The supplied panels usually are not designed to optimize the performance of the machinery, and the liability issues of panels that are not code compliant can be extreme. VIC knows the codes inside and out, and builds custom control panels that meet, or in most cases exceed, safety and electrical code requirements. Every VIC panel is UL-508a rated.
